

## **POW – end of term !**

### **For everybody**

A ship is lying on the water.

On the side of the ship is a ladder.

It has 6 steps and the second lowest step is exactly at the level of the water.

The distance from one step to the next is 25 cm.

The tide is coming and the water rises 60 cm.

How many steps are below water now ?

**This is the last POW for now**

**The POW-team would like to thank all the students, parents and teachers for taking part of this game.**

**We hope you have all enjoyed it as much as we have !**

**We wish everybody a nice summer**

***Therese Hyltberg, kristy Lundström and Lise Bruun***
